

Prevent and reduce instances of fraud

Share validated data across organisations and departments

Easily comply with data protection legislation

Speed up digital processes

Collaboration is key to effectively running public sector services, but it can be complex and time-consuming.

Service managers communicate with different departments, organisations, and citizens themselves. Virtual meetings (plenty of them), email and digital tools all contain different pieces of information. In some instances, information is written down in a notepad, or stays unread in someone's email inbox, moving down the list as endless new emails appear.

And all of this assumes that the provided information is correct and can be trusted. Realistically, on purpose or by accident, people will provide information that is incomplete, out-of-date, and in some cases even tampered with.

This leaves local authorities at risk of fraud, and fraud doesn't come cheap. Costs to resolve issues are expensive (think lengthy legal processes) and laborious.

However, there is an existing solution that vastly reduces the risk of fraud that local authorities are facing: its name is Digital Ledger Technology (also known as DLT).

SICCAR is an easily integrable data sharing platform that uses DLT to benefit local authorities. With **SICCAR**, local authorities can prevent and reduce instances of fraud, in turn improving the efficiency and speed of their digital services.

Why **SICCAR**?

SICCAR is a data sharing platform built with distributed ledger technology. We solve challenges around data sharing, governance, privacy, and security.

Simply put, **SICCAR** employs the best bit of DLT and applies that to real-world challenges in local and regional government.

SICCAR offers:

- Data sharing across organisations and departments with a single source of truth
- Fully traceable data, processes and auditing
- Joint control over shared information – enabling trust and validity
- Encryption by default
- Complete accountability and transparency

Moreover, **SICCAR** integrates seamlessly with existing digital systems and processes, so roll-out is simple and cost-effective.

How to get started with DLT and **SICCAR**

SICCAR has a Quick Start programme aimed specifically at local and regional government authorities. This programme, led by a knowledgeable customer success manager, is aimed at getting your organisation set up quickly and easily. You will work with us to deliver Proof of Value at pace and deploy **SICCAR** to the live environment without interruptions or downtime.
